

PSEUDO CODE WRITING1) Production Monitoring System

A factory records the daily production of N machines.

Write C++ Pseudo code to calculate the total production using a loop

START

1. Declare variables :

N , Production, Total

2. Read N

3. Initialize

Total $\leftarrow 0$

4. Repeat for $i = 1$ to N

Read production

Total $\leftarrow$ Total + Production

5. Display Total

STOP

2) Employee Payroll System

A company wants to calculate an employee's gross salary by adding the basic salary, HRA, and bonus.
Write C++ Pseudo code to calculate and display.

START

1) Declare variables :

Basic Salary, HRA, Bonus, Gross Salary

2) Read Basic Salary

3) Read HRA

4) Read Bonus

5) Calculate Gross Salary

Gross Salary $\leftarrow$ Basic Salary + HRA + Bonus

6) Display Gross Salary

STOP

Student Scholarship System

START

1) Declare variables :

Attendance, Marks

2) Read Attendance

3) Read Marks

4) If Attendance ≥ 75

 If Marks ≥ 85

 Display "Eligible for Scholarship"

 Else

 Display "Not Eligible for Scholarship"

 End If

Else

 Display "Not Eligible for Scholarship"

End If

STOP

4) Industrial Machine Control

START

1) Declare variable :
Choice

2) Read choice

3) Switch (choice)

Case 1 :

Display "Machine started"
Break

Case 2 :

Display "Machine stopped"
Break

Case 3 :

Display "Machine under Maintenance"
Break

Case 4 :

Display "Emergency Shutdown"
Break

Defaultt :

Display "Invalid choice"

4) End Switch

STOP

Industrial Sensor Data Processing

START

1) Declare variables :
Temperature (float), TempInt (integer)

2) Read Temperature

3) Convert Temperature into integer
 $\text{TempInt} \leftarrow (\text{int}) \text{Temperature}$

4) Display TempInt

STOP
